Subject: Garage permission

Hey my name is adijol and I live in melandsvegen 230 ,5919 frekhaug . I bought the house 1 year ago with my wife and when we bought it the owners told us that they have got permission to build a garage and gave us some kontakt info of the people they been contacting before to buy the materials . Some weeks ago I called alver kommuna to double check about the square meters of the garage and I have the right to build it on my own and they said yes I can build it any time . I was ready to build the garage and randomly my checking for some future building plans with the kommune I found out that the permit might not be valid in my surprise .

The permit was granted at 28 .08.2014 and they did prepare the grand to be stable because before it was hill there and they also prepared a door in the second floor of the house wich you could use the top of the garage as a balcony but on the moment as you can see on the pictures if you open it you can fall down to the ground.

So they did started the project at the 3 years requirement but as I learned fromthe megler they got in to financial problems and they could finish the project and that I have it in a email.

The problem is that they said we have permission to build the garage but I don't have that write in the sales rapport . Exist evidence of papers related with the garage wich his writing on it that he gave to us with the house documents .

The thing now is that I am kind of trapped because of miss leading info I got and I believe that the owners didnt know that the permit was not valid so it was not done In bad faith .

What I am asking is to give the right to finish the project and I can assure it will be done this year if you permit me . The permit was granted and it did start .
